# Patrick Stoica, Software Engineer

Experienced and adaptable full-stack developer with a focus on usability and sustainable operational practices.

## Employment History

### Senior Software Engineer at Puzzle Financial, Remote

October 2020 — May 2023

- Led frontend development by establishing component libraries, common utilities, and best practices across engineers and designers.
- Established full-stack product analytics with PostHog/RudderStack, educating PMs, marketers, and engineers on diverse use cases to empower self-sufficiency in research.
- Led a team of contractors to build out a multi-channel notification system with Knock.
- Built and maintained a variety of core feature sets (e.g. accounting workflows, reports, charts, notifications).
- Improved and guided full-stack GraphQL collaboration.
- Leveraged OpenAPI to generate type-safe contracts between microservices, enabling consistency and reducing breaking changes.

### Freelance Developer and Consultant

2013 — Present

- Aided Hugo & Marie in the development, optimization, and launch of Audible for Business marketing site (2019) using React, Next.js, and Contentful.
- Developed desktop experience for PodOp and HBO's interactive series Mosaic (2018) in collaboration with PMs, designers, engineers, and QA.
- Provided interim technical leadership for SingleOps (2013) by fixing technical and user experience issues while establishing stronger foundations for future development with Ruby on Rails, MongoDB, and AngularJS.
- Prototyped MVPs, developed websites, and provided consultation for agencies, early-stage projects, and individuals.

### Software Engineer at NS8, Remote

April 2020 — September 2020

- Developed fraud detection integrations for eCommerce platforms (WooCommerce, Salesforce) using TypeScript, AWS Lambda, and various internal/platform APIs.
- Researched WordPress and WooCommerce to guide plugin architecture; created development and QA environments using Docker, AWS ECS, Terraform, and CircleCI.
- Refactored browser-based E2E tests to create a common repository that other platforms and teams can extend.

### Senior Software Engineer at Telnyx, Remote

November 2018 — November 2019

- Created and maintained cross-functional internal tools, dashboards, and customer-facing features.
- Developed visualizations for business/uptime metrics; supported TV displays and in-depth analysis for desktop users.
- Contributed to multiple React and Angular apps, migrating several features to React.

- Met weekly with frontend chapter to discuss areas for improvement processes relating to the wider company.
- Served on-call rotation, ensuring quick triaging or resolution of user-facing bugs.
- Created and published WebRTC SDK on npm, enabling real-time video applications.

### Software Engineer at Ando, NYC

April 2016 — April 2017

- Collaborated with designers, product managers, and support/kitchen staff.
- Created and maintained a responsive food ordering app in React and MobX.
- Contributed to internal Kitchen Display System and in-house support tools.
- Integrated Firebase for real-time inventory and order tracking.
- Developed a kitchen label printer system using Node.js and HTML templates.
- Synchronized Seamless/Grubhub orders with internal API using UI automaton.
- Contributed to backend API using Hapi, MongoDB, and Firebase.

### Software Engineer at Squarespace, NYC

June 2014 — October 2015

- Worked on the core interface team to develop and maintain the site builder.
- Created reusable components for cancellation and signup surveys.
- Introduced ESNext, React, and Flux to enable incremental migration from YUI3. Migrated frontend build system from an in-house solution to Webpack, Babel, and npm.
- Established biweekly frontend meetings to encourage discussion around new techniques and best practices.

## Education

### B.S. in Computer Science, Georgia Institute of Technology, Atlanta, GA

2010 — 2014

- Specialization in Media and Information Systems
- IT Director, DJ, and live show producer at WREK 91.1 FM
